

HDC is pleased to have the opportunity to service the customers' needs and desires. We look at all relationships between ourselves and our customers as a partnership. The customer provides these concepts and requirements and HDC provides the engineering and technology to bring the product into reality. The goal of this partnership is to produce a high quality gadget, at the best possible price, manufactured here in the USA.

HDC has over 60 years of combined product development experience. Most products require Research and Development to create a working prototype. This type of environment requires a high level of creativity and a full understanding of what the customer wants. The development process requires the customer to be involved in the design phase. Many questions will come up during this part of the design, and the customer will need to understand the ramifications of the different solutions possible in order to make the best decision.

We understand that the dollars put into product development are hard earned, and must be used intelligently. HDC will not accept a project that it does not believe in, and cannot commit its best efforts to.

HDC specializes in ODM/OEM (original design manufacturing / original equipment manufacturing). We design the products to be manufacture able. HDC has a network of partner manufacturing here in the US and abroad. HDC does low level components to finished turnkey end user packaged products.

Let HDC take your dreams and turn them to reality.
